

1/8 — TITLE

InBody Auditor

105.8 → 98.7 kg. Muscle held. Proof published.

Free core, no subscription – the chart is the product.

2/8 — PROBLEM

17 dead muscle apps

Store search rewards undifferentiated trackers; every muscle-positioned GLP-1 app sits at 0-8 ratings with identical copy.

Users don't need another tracker. They need one believable story with numbers.

3/8 — STORY ASSET

One lifter, one chart

7.1 kg down • +0.3 kg muscle

105.8 → 102.4 → 99.1 → 98.7. Fat -3.1 pts. Protein floor 197 g/day.

Coach: Strong drop. Keep protein at 197g, lift heavy, and stay consistent.

4/8 — ARCHITECTURE

Three boxes, no servers

Daytona – fresh sandbox per run, signed preview URL, wait-True teardown.

Nosana – qwen/qwen3.8-27b coach on decentralized GPU.

DNSimple – record 84669063 in auditor-demo.test as publish proof.

5/8 – LIVE NUMBERS

Verified, not mocked

- 105.8 → 98.7 kg, delta -7.1
- Muscle +0.3 kg held, fat -3.1 pts
- Protein floor 197 g/day
- DNSimple prod record 84669063, account 178711

6/8 – THREE TRAPS FIXED

Traps we refused

- No mock data – every number recomputed from CSV in sandbox.
- No generic coach – one line pinned to the 197 g floor.
- No localhost demo – live DNS record as the receipt.

7/8 – SPONSORS

Each sponsor does real work

- Daytona: compute + preview + teardown (10 vCPU tier cap).
- Nosana: decentralized coach inference.

- DNSimple: public proof of publish.

8/8 — ASK

Try your own scan

Free core, no subscription. Bring a CSV, get a chart and one honest line.
